Is the SKELETOR token accessible, does it have any utility?

\$SKELETOR is a crypto token native to the Solana network. The amount of people using Solana network has grown by several million this year alone. Quickly becoming a favorite network for both developers and users the SOL network is much faster and much cheaper (up to 50x cheaper) than the older Ethereum Network which is used by SHIB. Since Skeletor is native to Solana network \$SKELETOR can be used in thousands of decentralized applications much more quickly and much less expensively than many other tokens not on this network.

How do i buy Skeletor Token?

Currently SKELETOR are available on Raydium here. We strongly believe in the true nature of crypto and the freedoms decentralized exchanges offer our users. Early in it's development SKELETOR will only be available on DEX exchanges but at some time in the near future SKELETOR will become available on centralized exchanges as well.

AUDIT

We believe in our security.

NEXT GEN NFTS MULTI-BLOCKCHAIN USE ENDLESS POSSIBILITIES

Skeletor is here to stay. No idea is too big, no task is too complex with the support of our community. DAO proposals and voting will lead Skeletor in a positive direction fully decided on by \$SKELETOR holders.
